LISTING OF CLAIMS

- 1.(Currently amended) A method of reporting search results including the steps of: retrieving search results from one or more search engines; filtering the retrieved search results according to one or more criteria; extracting locational information from the filtered search results; storing the locational information in one or more output <u>data</u> hierarchies; and displaying the search results within the one or more output <u>data</u> hierarchies.
- 2. (Original) The method of claim 1 further including the step of transforming a search request to a form suitable for each of said one or more search engines.
- 3. (Original) The method of claim 1 further including the step of transforming said search results from said one or more search engines to a standardised form.
- 4. (Original) The method of claim 1 wherein the criteria for filtering includes removing duplicates.
- 5.(Original) The method of claim 1 wherein the step of extracting locational information includes the step of analyzing a URL of the search result.
- 6.(Original) The method of claim 1 wherein the step of extracting locational information includes the step of analyzing a file system location of the search result.
- 7.(Original) The method of claim 1 wherein the step of extracting locational information includes the step of analyzing a taxonomy of the search result.
- 8.(Original) The method of claim 1 wherein the one or more output hierarchies are constructed from the locational information.
- 9.(Original) The method of claim 1 further including the steps of retrieving further search results from one or more search engines and merging the search results to the one or more output hierarchies.
- 10.(Currently Amended) The method of claim 1 further including the steps of manipulating said output hierarchies to collapse, expand, move or flag said search results.
- 11. (Original) The method of claim 1 further including the steps of adding notes and discussions to search results and/or hierarchies.
- 12.(Currently Amended) The method of claim 1 further including the steps of sorting and prioritising prioritizing the search results within an output hierarchy or between output hierarchies.
- 13. (Original) The method of claim 1 further including the step of storing search results and hierarchies.

Art Unit 2164 10/539851 25 May 2009

- 14.(Original) A method of compiling and presenting search results including the steps of: defining search parameters for submission to one or more search engines; passing the search parameters to a search engine submitter; said search engine submitter transforming the search parameters to search terms for each of said one or more search engines; receiving results from said one or more search engines; said search engine submitter transforming said results into standardised results having a standardised format; passing the standardised results to a location analyser; said location analyser filtering the standardised results according to criteria to produce filtered results; passing the filtered results to a hierarchical data modeller; said hierarchical data modeller extracting locational information from said filtered results; compiling said locational information in an output hierarchy; and displaying the filtered results within the output hierarchy.
- 15.(Original) A search result reporting engine comprising: a location analyser means that filters search results received from one or more search engines according to one or more criteria; and an hierarchical data modeller means that extracts locational information from the filtered search results and compiles said search results into output hierarchies based upon the locational information.
- 16. (Canceled)
- 17. (Original) The search result reporting engine of claim 15 further comprising a Report Renderer means that displays the search results within the output hierarchies.
- 18. (Original) The search result reporting engine of claim 15 further comprising means for manipulating said hierarchies to collapse, expand, move or flag said search results.
- 19. (Original) The search result reporting engine of claim 15 further comprising means for adding notes and discussions to search results and/or hierarchies.
- 20.(Currently Amended) The search result reporting engine of claim 15 further comprising a display means that sorts and prioritises prioritzes the search results within a display hierarchy or between display hierarchies.
- 21.(Original) The search result reporting engine of claim 15 further comprising a search engine submitter means adapted to accept a search query from a user and to submit the search query to one or more search engines.
- 22.(Original) The search result reporting engine of claim 21 wherein search engine submitter reformats the search query for each search engine.
- 23. (Original) The search result reporting engine of claim 15 further comprising a storage means for storage of search results and hierarchies.
- 24.(Original) The search result reporting engine of claim 23 wherein the storage means provide the capacity to merge new results with stored results.

Art Unit 2164 10/539851

- 25. (Original) The search result reporting engine of claim 15 wherein the hierarchical data modeller comprises means for extracting location and meta information from a search engine result set; means for compiling the location and meta information into a N-way hierarchical storage location; and means for retrieving and displaying like information from the storage location.
- 26. (Original) An hierarchical data modeller comprising: means for extracting location and meta information from a search engine result set; means for compiling the location and meta information into a N-way hierarchical storage location; and means for retrieving like information from the storage location.
